

AI Infrastructure Case Study

AI Infrastructure

Supporting the Launch of the First
NVIDIA Blackwell Data Centre

The Challenge

Sweden was to set to host the first state-of-the-art NVIDIA Blackwell Data Centre.

The deployment required:

- A specialist team with expertise in high-performance computing and advanced GPU technologies.
- A 12-week deadline to have all personnel on-site and operational.
- International relocation of skilled professionals while ensuring compliance with global regulations.

Our Approach

WNTD executed a high-speed talent deployment strategy, tapping into its data centre and AI infrastructure network to source and relocate a highly skilled team.

- **Targeted Sourcing:** Identified passive candidates with direct experience in HPC and GPU operations.
- **Bespoke Outreach:** Positioned the project as a ground-breaking industry opportunity securing buy-in from top talent.
- **End-to-End Relocation Support:** Managed logistics, visas and on-boarding for all personnel moving to Sweden.

The Results

- **Full Operational Workforce Delivered in 12 Weeks:** 40% faster than the industry norm.
- **Seamless International Relocation:** Zero delays ensuring on-time deployment.
- **Successful Data Centre Launch:** The team was fully trained and ready for go-live from day one.

Client Feedback

WNTD's ability to deliver at speed was critical to our success. Their efficiency, professional network and expertise made this historic project possible.
